

# Share Family

## Advancements in linked data collaboration

[BIBFRAME Workshop in Europe 2024](#)

17th September 2024

Tiziana Possemato (@Cult and Casalini Libri)  
Serena Cericola (Casalini Libri)

**BIBFRAME  
Workshop  
in Europe**

# BIBFRAME interoperability

---

## **CKB granularity**

- controlled vocabularities
- provision activity

## **Conversion tool**

## **Third party integration**

- Alma
- FOLIO
- Sinopia

# CKB Granularity

---

## Objective

CKB as a **single source of truth** for the LOD Platform and Share Family installations

## How?

- a **finer granularity** level of the CKB in compliance with BIBFRAME granularity

## What will this improve?

- a **“format-agnostic”** CKB where all input formats converge into one conversion source (eg. MARC21, UNIMARC, native BIBFRAME/RDF eg. from LD4P Sinopia application profiles...)
- **improved conversion** from MARC to BIBFRAME and vice versa
- **single conversion pipeline** from the CKB – removing the conversion pipeline based on MARC

# CKB granularity - controlled vocabularies

One of the main pipelines we're following in this context is the management of attributes through controlled vocabularies instead of literals.

How we did it:

- definition of each controlled vocabulary in collaboration with the Sapiientia Entity Identification working group

Projects /  Share-VDE /  SVDE-8492 /  SVDE-9841

Polarity vocabulary definition

- each vocabulary is enriched with external authoritative sources (RDA, LOC, FINTO...)
- clusterization of controlled vocabulary, each value is then assigned an SVDE URI

Projects /  Share-VDE /  SVDE-8492 /  SVDE-9638

Polarity vocabulary clusterization

**values: from literals to URIs**

# CKB granularity - controlled vocabularies

---

For some attributes → two combined solutions:

1. values coming from positional tags are reconciled with values from controlled vocabulary
2. where this is not possible, management of literal attribute

[SVDE-9622](#) SoundContent vocabulary clusterization

[SVDE-9624](#) ColorContent vocabulary clusterization

# What we've done (1)...

# CKB Granularity - provisional activity

Information relative to **Publishers** has been structured in a singular RDF section

What for? → better identification and reconciliation of Publishers

SVDE-10039	Publisher management update in Folio CKB integration
SVDE-9502	API management for new entity Provision Activity
SVDE-10005	Provision Activity not generate for Unimarc
SVDE-9901	Wrong ProvisionActivity clusterization
SVDE-9501	Enrichment Provision Activities from tag 260/264
SVDE-9275	Grouping publication attributes
SVDE-8296	26x conversion for 008 [06] = p

# The SVDE ontology - a BIBFRAME extension

The Share-VDE Ontology supports the Share Family of initiatives (based in federated linked data discovery environments) and is developed as an **extension to BIBFRAME**.

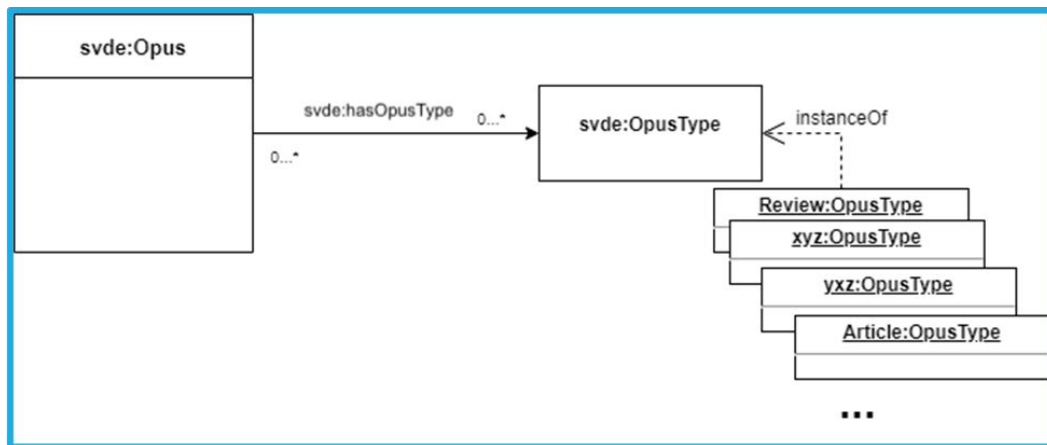

Almost completed!

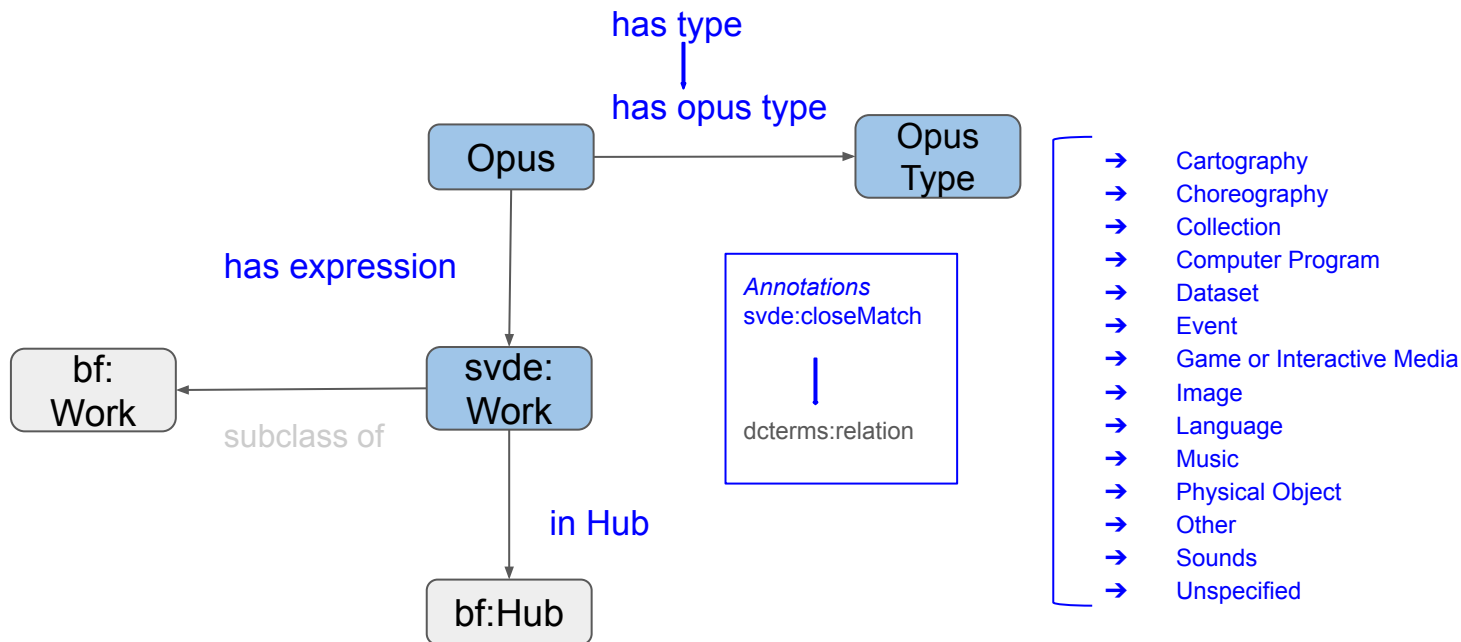

Preliminary version:

<https://doi.org/10.5281/zenodo.8332351>

latest update by Nancy Lorimer at the [Share Family Workshop 2024](#)

# The SVDE ontology - a BIBFRAME extension

# Converter tool

---

Designed to be flexible to:

1. Manage BIBFRAME updates
2. Ensure compatibility with different BIBFRAME variations

Current outputs:

- SVDE ontology-based output
- LOC collaboration: testing pure BIBFRAME ontology with bflc extension

Additional path:

- Exploration of IFLA-LRM/RDA model

# Third party integration

---

## ALMA

✓ circulation processes

🚧 together with Alma libraries, exploration of CRUD APIs

## FOLIO

- **pilot integration** in progress with Lehigh University (Share-VDE member and FOLIO adopter)
- initial tests completed: automated data flow from JCricket into FOLIO's Inventory module (reverse flow to be implemented)
- JCricket: enables this integration and can also be used for original cataloging.

# SINOPIA integration: high-level milestones

---

- ✓ set-up the connector to fetch data from Sinopia
- ✓ ingested subset of Sinopia data from Stanford
- ✓ created the parser so that RDF data coming from Sinopia can be clustered by Share-VDE processes
- ⚠ begin testing phase
- 🎯 at the end of this process, Sinopia data will be included in the Share-VDE CKB - Cluster Knowledge Base
