Release Notes

Share Family

software version 3.0.1

Document Number: REL-3.0.1.

This edition applies to Share Family software Version 3.0.0., Release 3.0.1.

The release involves the following components of Share Family LOD Platform technology framework: Cluster Management Module, API, Moonlight (front-end module), RDBMS (database), and refers to both bug fixes and new developments.

The various software versions released over time are common to the technology layers of all the Share Family initiatives.

For an overview of the software versions installed on the different environments, see Share Family AWS environments summary.

The implementations described in this document are identified by an ID (eg. SVDE-8871) and a title. The very technical details, not relevant for the end users, are not included in this document.

All descriptive tasks corresponding to implementations can be consulted for further information in the Jira portal where member institutions have access.

If you have any comments on this publication, please send them to info@svde.org.

1 General notes

1.1 Contents

This document lists and briefly describes the major enhancements and fixes that are implemented for this release.

1.2 Installation notes

1. This service pack of Share Family software version 3.0.1. involves changes to the platforms now at 3.0.0. version.

2 Solved Bugs

2.1 API

- **SVDE-9823 After split set cancellation, the receiver should be removed (if empty)**
  The entity that was assigned as receiver in a split set should, after cancellation of that split set, be removed (if it is empty/without own properties)

2.2 Moonlight (front-end module)

- **SVDE-9869 Place form remains in loading state on demo environment**
  During the insertion of a non-existent place of birth, the metadata tab is not displaying correctly

- **SVDE-9871 No relevant feedback when trying to create new entity as basic user**
  Since basic users are not allowed to create new entities, this function should be disabled. Second best, if the user tries this, s/he should be informed about his/her lacking credentials

- **SVDE-9874 Not allowed to change language for value strings**
  For value strings, it's not possible to change the language

- **SVDE-9881 Newly created CVE in relationship input field should automatically be selected as leader**
  When a new Controlled Vocabulary Entity is created in an input field, it should automatically be marked as a leader

- **SVDE-9889 Edit function resets editing forms when activated from Explore/search**
  All the open panes disappeared and were replaced with a single editing pane when activated from Explore/search

- **SVDE-9949 Error when opening a provenance overlay for property with no instances**
  Deleting all instances of a property inside the provenance window, or opening a provenance window of a property that has 0 instances, will cause an error

3 Enhancements

3.1 Cluster Management Module

- **SVDE-9899 ReductionRatio and Record status vocabularies definition**
  Creation of a new controlled vocabulary definition for the attribute ReductionRatio and RecordStatus

- **SVDE-9944 Item management Toronto**
  Manage items for Toronto library

- **SVDE-9877 NLN: consider also $b tag 246 for OPUS creation**
  In some NLN records, derived from 246 tags with the presence of $iOriginaltittel, the same original title is distributed across $a and $b in some records, while the entire title is collected in $a in other records. It is required to also add the contents of the $b, if present, to the mapping and clustering of these tags for a correct reconciliation of the OPUS entity

3.2 API

- **SVDE-9826 Management of svde:Work title attribute (on fly)**
  The entity svde:Work will be provided by a specific title, composed by: Title+ Language + Content type

3.3 RDBMS (database)

- **SVDE-9818 Update members in SVDE tenant**
  Update the members University of Lehigh and University of Toronto in SVDE tenant

3.4 Moonlight (front-end module)

- **SVDE-9729 Changes for overview menu**
  Now the Overview menu allows to see only the attributes list related to an entity. We request a menu similar to the menu for entities in MARVA. In MARVA, the overview menu allows the user to "jump" to the selected attribute: this would be very useful for entities with lots of attributes

- **SVDE-9731 Attribute grouping in JCricket**
  Now in JCricket each entity has two attributes grouping: Basic info and Other. We request that attributes are "grouped" on the basis of a specific type

- **SVDE-9732 Display URI as a read-only property in Metadata tab**
  The full URI should be displayed when editing an entity in JCricket and it should be easy to copy the URI

- **SVDE-9873 Icons in J.Cricket interface**
  Pencil icon should be 66% black and the button for adding a new pane should have a tooltip

- **SVDE-9924 Remove beta badge from 3.x portals**
  There should be no beta badge on 3.x versions of svde

- **SVDE-9959 bf:works should use title**
  Previously bf:works did not have a title, so on the UI we used the URI as a substitute. Now the API should be providing a title so we should display that instead
